

1. Project Objective

Build a modern, scalable **global fashion e-commerce platform** where:

- Admin can add/manage dresses and fashion products.
- Customers can browse products worldwide.
- Customers can select country and currency.
- Product prices can be displayed in the customer's selected currency.
- Customers can register/login and manage their profile.
- Customers can add products to cart and wishlist.
- Customers can place orders online.
- Multiple payment methods should be supported.
- Shipping charges should automatically calculate based on country/location, weight and delivery method.
- Customer should receive professional invoices similar to major e-commerce platforms such as Flipkart/Amazon.
- Admin should have complete control over products, inventory, orders, customers, payments, shipping, coupons and reports.

2. WEBSITE STRUCTURE

The system should have **3 major portals**:

A. Customer Website

Public shopping website.

B. Admin Panel

Complete business management system.

C. Delivery/Order Management

Optional separate delivery/logistics interface for managing shipments and delivery status.

3. CUSTOMER WEBSITE

Homepage

Homepage should have:

Header

- Company logo
- Search bar
- Country selector
- Currency selector
- Language selector
- Login / Register
- Wishlist
- Cart
- My Orders

Example:

Country: India IN

Currency: INR ₹

Customer can change:

Country → United States

Currency → USD \$

and prices should update accordingly.

4. HOMEPAGE SECTIONS

Main Banner

Examples:

- New Collection
- Summer Collection
- Wedding Collection
- Festive Collection
- International Collection
- Special Offers

Buttons:

SHOP NOW

EXPLORE COLLECTION

Category Section

Example:

- Sarees
- Dresses
- Kurtis

- Salwar Suits
- Lehengas
- Gowns
- Tops
- Shirts
- Jeans
- Kids Wear
- Men's Wear
- Women's Wear
- Accessories

Admin should be able to create unlimited categories.

5. PRODUCT CATALOGUE

Every product should contain:

Basic Information

- Product Name
- SKU
- Product Code
- Category
- Subcategory
- Brand
- Product Description
- Short Description

- Product Type
- Gender
- Collection
- Tags

Product Images

Allow:

- Main image
- Multiple gallery images
- Zoom
- Product video
- 360° image/video – optional

Example:

Product:

Designer Silk Saree

SKU:

MS-SAREE-1001

Category:

Women's Wear

Sub Category:

Silk Saree

6. PRODUCT VARIANTS

Very important for clothing.

Each product can have multiple:

Sizes

- XS
- S
- M
- L
- XL
- XXL
- XXXL
- Custom Size

Colors

- Red
- Blue
- Black
- Green
- Pink
- White
- etc.

Variants

Example:

Red – S – 10 units

Red – M – 15 units

Red – L – 20 units

Blue – S – 5 units

Blue – M – 10 units

Blue – L – 8 units

Each variant should have:

- SKU
- Price
- Sale price
- Stock
- Weight
- Dimensions
- Barcode
- Image

7. PRODUCT PRICING

Admin should be able to configure:

Base Price

Example:

₹5,000

Discount

Example:

20%

Selling Price

₹4,000

MRP

₹6,000

Display:

MRP ₹6,000

Price ₹4,000

20% OFF

You Save ₹2,000

8. MULTI-CURRENCY SYSTEM

This is one of the most important requirements.

Website should support multiple currencies.

Example:

Country	Currency
India	INR ₹
USA	USD \$
UK	GBP £
Europe	EUR €

Country	Currency
---------	----------

UAE	AED د.إ.
-----	----------

Singapore	SGD \$
-----------	--------

Malaysia	MYR RM
----------	--------

Saudi Arabia	SAR ريال
--------------	----------

Australia	AUD \$
-----------	--------

Canada	CAD \$
--------	--------

Admin should be able to enable/disable currencies.

Currency Conversion

Two options:

Option 1 - Automatic exchange rate

System gets exchange rates through an exchange-rate API.

Option 2 - Admin-controlled rate

Admin can manually set conversion rates.

Recommended:

Automatic rate + Admin override.

Example:

Base price:

₹5,000

System calculates:

INR	₹5,000
-----	--------

USD	\$58
-----	------

GBP £45

AED AED 213

SGD SGD 78

Important:

Currency displayed to the customer and currency actually charged should be clearly recorded against the order.

Do not simply convert the invoice later.

9. COUNTRY SELECTION

Customer should be able to select:

Country

State/Province

City

Postal Code

Country selection should determine:

- Currency
 - Available payment methods
 - Shipping options
 - Shipping charges
 - Tax rules
 - Delivery availability
 - Estimated delivery date
-

10. LOCATION DETECTION

System may automatically detect customer's country using:

- Browser locale
- IP-based country detection

But customer must be able to manually change it.

Example:

We detected your location as India.

Country:

India ▼

Currency:

INR ₹ ▼

Do not force IP location.

11. SEARCH

Advanced search required.

Customer can search:

Silk saree

Red dress

Designer gown

Cotton kurti

Men's shirt

Search should support:

- Product name
- SKU
- Category
- Brand
- Tags
- Description

12. FILTERS

Product listing should have:

Filter by

- Category
- Subcategory
- Price
- Brand
- Color
- Size
- Fabric
- Pattern
- Occasion
- Gender
- Rating
- Availability

- Discount

Sort by

- Recommended
- Newest
- Price Low → High
- Price High → Low
- Best Selling
- Highest Rated
- Discount

13. PRODUCT DETAILS PAGE

Product page should show:

Product Name

Rating

Reviews

Price

MRP

Selling Price

Discount

Offers

Example:

10% OFF

Free shipping

Bank offer

Coupon available

Color

Select color.

Size

Select size.

Quantity

• / -

Stock

Example:

Only 5 left

Buttons

ADD TO CART

BUY NOW

ADD TO WISHLIST

14. SIZE GUIDE

Every clothing category should support a size chart.

Example:

Size Chest Waist Length

S 36 30 40

Size Chest Waist Length

M 38 32 41

L 40 34 42

XL 42 36 43

Admin should be able to create category-specific size charts.

15. CUSTOMER REGISTRATION

Customer registration:

- Full Name
- Email
- Mobile Number
- Password
- Country
- Date of Birth – optional
- Gender – optional

Login through:

- Email
- Mobile
- Password
- OTP
- Google – optional
- Apple – optional

16. CUSTOMER ACCOUNT

"My Account" should contain:

Dashboard

My Orders

My Profile

My Addresses

Wishlist

Reviews

Coupons

Wallet - optional

Returns

Refunds

Notifications

Saved Payment Methods

17. ADDRESS MANAGEMENT

Customer can save multiple addresses.

Example:

Home

Office

Other

Address fields:

- Full Name
- Mobile
- Address Line 1
- Address Line 2
- City
- State
- Country
- Postal Code

Customer can select:

Default Shipping Address

Default Billing Address

18. SHOPPING CART

Cart should display:

Product

Image

Size

Color

Quantity

Price

Discount

Subtotal

Example:

Designer Silk Saree

Red / Free Size

₹5,000

Qty: 2

Subtotal: ₹10,000

Cart summary:

Subtotal

Discount

Coupon Discount

Shipping

Tax

Grand Total

19. COUPON SYSTEM

Admin can create coupons.

Example:

WELCOME10

10% discount.

Coupon configuration:

- Coupon code

- Discount type
- Percentage
- Fixed amount
- Minimum order value
- Maximum discount
- Start date
- Expiry date
- Country restriction
- Product restriction
- Category restriction
- Usage limit
- Customer usage limit

20. CHECKOUT

Checkout should follow a simple flow similar to major e-commerce platforms.

Step 1

Login / Guest Checkout

Step 2

Shipping Address

Step 3

Delivery Method

Step 4

Payment Method

Step 5

Order Review

Step 6

Place Order

21. PAYMENT SYSTEM

Payment gateway should support international transactions.

Possible gateway architecture:

- Razorpay
- Stripe
- PayPal
- Adyen
- Other gateway based on business country

The system should be designed so that gateways can be added later.

Payment methods may include:

- Credit Card
- Debit Card
- UPI
- Net Banking
- Wallets
- PayPal
- Apple Pay
- Google Pay

- International Cards

Availability should depend on country and gateway.

22. PAYMENT STATUS

Every payment must have a status.

INITIATED

PROCESSING

SUCCESS

FAILED

CANCELLED

REFUNDED

PARTIALLY_REFUNDED

Never mark an order as paid based only on the browser redirect.

The backend must verify the payment with the payment gateway/webhook.

23. ORDER MANAGEMENT

After payment:

Generate unique order number.

Example:

MST-2026-0000125

Order should contain:

- Order ID
- Customer

- Products
- SKU
- Variant
- Quantity
- Price
- Currency
- Discount
- Tax
- Shipping
- Payment
- Billing address
- Shipping address
- Order date

24. ORDER STATUS

Order lifecycle:

ORDER PLACED

PAYMENT CONFIRMED

ORDER CONFIRMED

PROCESSING

PACKED

SHIPPED

OUT FOR DELIVERY

DELIVERED

Other statuses:

CANCELLED

RETURN REQUESTED

RETURN APPROVED

RETURN PICKED UP

REFUND INITIATED

REFUNDED

FAILED DELIVERY

25. ORDER TRACKING

Customer should be able to track order.

Example:

Order Confirmed ✓

Packed ✓
Shipped ✓
In Transit ✓
Out for Delivery ✓
Delivered ✓

Tracking information:

- Courier
- Tracking Number
- Tracking URL
- Shipment date
- Estimated delivery date

26. INVOICE / BILLING

Invoice should look professional like Flipkart/ Amazon-style billing.

Invoice should contain:

Company

- Company Name
- Logo
- Registered Address
- Email
- Phone
- GSTIN – if applicable

- Tax registration details as applicable

Customer

- Customer name
- Billing address
- Shipping address
- Country

Order

Invoice Number

Order Number

Invoice Date

Payment Method

Currency

Product table

Product SKU Qty Price Discount Tax Total

Bottom:

Subtotal

Discount

Shipping

Tax

Grand Total

Invoice should be downloadable as:

PDF

and emailed automatically.

27. INTERNATIONAL TAX SYSTEM

Do not hard-code Indian GST into the entire system.

Tax engine should support country-specific tax rules.

For India:

- GST
- CGST
- SGST
- IGST

For other countries, system should support configurable tax rules.

Admin should be able to configure:

Country

State/Region

Tax Name

Tax Percentage

Product Category

Effective Date

For international sales, the actual tax/customs treatment should be configured based on the applicable jurisdiction and your tax advisor's rules.

28. SHIPPING SYSTEM

Admin should configure shipping zones.

Example:

Zone 1

India

Zone 2

UAE

Zone 3

Singapore / Malaysia

Zone 4

UK / Europe

Zone 5

USA / Canada

Zone 6

Australia

29. SHIPPING CHARGE

Shipping can depend on:

- Country
- State
- Postal code
- Product weight
- Order value
- Quantity
- Shipping method

Example:

India

₹0 – ₹999 ₹80

₹1,000+ FREE

USA

\$0 – \$100 \$15

\$100+ FREE

30. SHIPPING METHODS

Customer can select:

Standard Delivery

Express Delivery

International Priority

Display:

Standard Delivery

Estimated: 7–12 days

\$10

Express Delivery

Estimated: 3–5 days

\$25

31. INTERNATIONAL SHIPPING

System should support:

- International addresses
- Country-specific shipping rates
- Courier integration
- Tracking
- Customs information
- Shipping labels
- Commercial invoice
- Package weight
- Package dimensions

Potential courier integrations can be added based on operating countries.

32. INVENTORY MANAGEMENT

Admin should have complete inventory.

Fields:

SKU

Product

Variant

Warehouse

Available Stock

Reserved Stock

Sold Stock

Returned Stock

Damaged Stock

Reorder Level

Example:

SKU: DRESS-1001-RED-M

Available: 25

Reserved: 3

Sold: 72

Available stock should automatically reduce after successful order according to the business's chosen inventory policy.

33. LOW STOCK ALERT

Admin should receive notification:

LOW STOCK ALERT

Product: Designer Red Dress

SKU: DR-1001

Current Stock: 4

Admin can configure reorder threshold.

34. ADMIN PANEL

Admin login:

/admin

Dashboard:

Total Sales

Today's Sales

Orders

Customers

Products

Low Stock

Pending Orders

Returns

Refunds

Charts:

- Daily sales
- Monthly sales
- Yearly sales
- Orders
- Customers
- Best-selling products
- Revenue by country
- Revenue by currency

35. ADMIN USER ROLES

Do not give every employee full admin access.

Roles:

Super Admin

Full access.

Catalogue Manager

Products/categories/inventory.

Order Manager

Orders/shipping.

Finance Manager

Payments/invoices/refunds.

Marketing Manager

Coupons/banners/promotions.

Support Agent

Customer support/orders.

Permissions should be configurable.

36. CATEGORY MANAGEMENT

Admin can:

- Add category
- Edit category
- Delete category
- Add subcategory

- Upload category image
- Set SEO title
- Set SEO description
- Set URL slug
- Set display order
- Enable/disable category

37. PRODUCT MANAGEMENT

Admin buttons:

+ Add Product

Edit

Duplicate

Delete

Archive

Publish

Unpublish

Product statuses:

Draft

Active

Out of Stock

Inactive

Archived

38. BULK PRODUCT UPLOAD

Very useful.

Admin should be able to upload:

Excel/CSV

Example:

SKU

Product Name

Category

Size

Color

MRP

Selling Price

Stock

Weight

Description

System validates the file before importing.

Show:

100 products found

95 valid

5 errors

Admin can download error report.

39. IMAGE MANAGEMENT

Admin should be able to:

- Upload multiple images
- Reorder images
- Set main image
- Delete image
- Compress images
- Generate thumbnails

Recommended image formats:

- WebP
- JPG
- PNG

Use CDN/object storage for production.

40. WISHLIST

Customer can click:

♡ Add to Wishlist

Wishlist contains:

- Product
- Price
- Availability
- Discount

- Add to Cart
- Remove

Optional:

Price Drop Notification

41. PRODUCT REVIEWS

Customer can review only products associated with eligible purchases.

Review:

- Star rating
- Title
- Comment
- Images
- Video – optional

Admin:

- Approve
 - Reject
 - Hide
 - Report
-

42. NOTIFICATION SYSTEM

Customer notifications

- Registration
- Order placed

- Payment successful
- Order packed
- Order shipped
- Out for delivery
- Delivered
- Cancellation
- Return
- Refund

Channels:

- Email
- SMS
- WhatsApp – optional
- Push notification – if mobile app is developed

43. EMAIL SYSTEM

Create professional email templates.

Order Confirmation

Thank you for your order.

Order #MST-2026-0000125

Your order has been successfully placed.

Shipping Confirmation

Your order has been shipped.

Tracking Number:

XXXXXXXXXX

Delivery Confirmation

Your order has been delivered.

44. RETURNS & REFUNDS

Customer can request return from:

My Orders → Return

Customer selects:

- Product
- Quantity
- Reason
- Description
- Images

Reasons:

- Wrong size
- Damaged
- Wrong product
- Quality issue
- Received different item
- Other

45. RETURN WORKFLOW

Customer Request

Admin Review

Approved / Rejected

Pickup

Product Received

Quality Check

Refund Approved

Refund Processed

46. REFUND SYSTEM

Refund statuses:

REQUESTED

APPROVED

PROCESSING

COMPLETED

FAILED

Support:

- Full refund
- Partial refund
- Product refund
- Shipping refund – configurable

Refund should be linked to original payment transaction.

47. ADMIN ORDER SCREEN

Admin should see:

Order #MST-2026-000125

Customer:

Rahul Kumar

Country:

India

Currency:

INR

Payment:

PAID

Items:

3

Total:

₹8,450

Status:

PROCESSING

Actions:

Confirm

Pack

Ship

Cancel

Print Invoice

Print Shipping Label

Refund

Create Return

48. REPORTS

Admin reports:

Sales Reports

- Daily
- Weekly
- Monthly
- Yearly

Product Reports

- Best sellers
- Poor performers
- Out of stock
- Low stock

Customer Reports

- New customers
- Repeat customers
- Country-wise customers

Financial Reports

- Gross sales
- Discounts
- Tax
- Shipping
- Refunds
- Net sales

Country Reports

Example:

India ₹15,00,000

USA \$25,000

UAE AED 45,000

Singapore SGD 30,000

49. SEO

Every product/category should support:

- SEO title
- Meta description
- URL slug
- Keywords
- Canonical URL
- Open Graph image

Example:

/designer-silk-saree-red

Avoid URLs like:

/product?id=123

50. BLOG / CONTENT MANAGEMENT

Admin should be able to create:

- Blogs
- Fashion guides

- Size guides
- Style guides
- News
- Offers

Example:

"10 Best Silk Sarees for Wedding Season"

This will also help SEO.

51. CUSTOMER SUPPORT

Create support system.

Customer can create:

Support Ticket

Order Number

Issue Category

Message

Attachment

Admin/support agent can reply.

Ticket status:

OPEN

IN PROGRESS

WAITING FOR CUSTOMER

RESOLVED

CLOSED

52. SECURITY REQUIREMENTS

Developer must implement:

- HTTPS
- Password hashing
- Secure authentication
- JWT/session security
- OTP protection
- Rate limiting
- CSRF protection where applicable
- XSS protection
- SQL injection prevention
- Secure file upload
- Admin 2FA
- Audit logs
- Payment webhook verification
- Role-based access control
- Backup
- Database encryption where appropriate

Never store raw card information.

Payment card data should be handled by a compliant payment provider.

53. DATABASE STRUCTURE

Recommended core tables:

users

customers

admin_users

roles

permissions

products

product_variants

product_images

categories

subcategories

brands

attributes

sizes

colors

inventory

warehouses

stock_movements

carts

cart_items

wishlists

wishlist_items

order_items

order_addresses

order_status_history

payments

payment_transactions

refunds

coupons

coupon_usage

shipping_zones

shipping_methods

shipping_rates

shipments

tracking_events

tax_rules

reviews

review_images

returns

return_items

notifications

email_templates

invoices

countries

states

currencies

exchange_rates

audit_logs

54. RECOMMENDED TECH STACK

For a professional scalable platform:

Frontend

Next.js / React.js

Backend

Node.js + NestJS

or

Java Spring Boot

Database

PostgreSQL

Cache

Redis

Search

Elasticsearch / OpenSearch

Storage

AWS S3

CDN

CloudFront

Hosting

AWS

Authentication

JWT + Refresh Token / secure session architecture

Email

Amazon SES / SendGrid / equivalent

SMS/OTP

Provider based on target countries

55. SYSTEM ARCHITECTURE

Recommended:

CUSTOMER

|

↓

NEXT.JS WEBSITE

|

↓

API / BACKEND

|

├— Authentication

├— Product Service

├— Cart Service

├— Order Service

├— Payment Service

├— Shipping Service

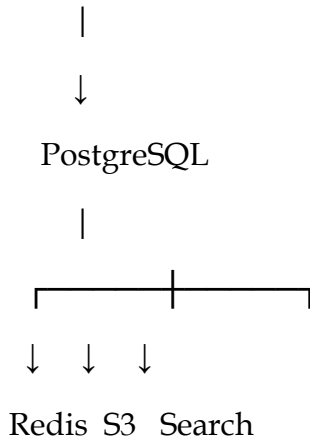

├— Tax Service

├— Currency Service

├— Inventory Service

├— Notification Service

└— Review Service

56. MOBILE RESPONSIVENESS

Website must work properly on:

- Desktop
- Laptop
- Tablet
- Android
- iPhone

Minimum supported:

Chrome

Safari

Firefox

Edge

57. MOBILE APP – FUTURE

Architecture should allow future:

Android App

iOS App

using:

- Flutter
- React Native

The same backend APIs should be usable by website and mobile applications.

58. ADMIN DASHBOARD - MENU

Give your developer this exact menu structure:

ADMIN DASHBOARD

1. Dashboard

2. Catalogue

├— Products

├— Categories

├— Subcategories

├— Brands

├— Attributes

├— Sizes

├— Colors

└— Bulk Upload

3. Inventory

- |— Stock
- |— Warehouses
- |— Stock Movement
- └— Low Stock

4. Orders

- |— All Orders
- |— New Orders
- |— Processing
- |— Packed
- |— Shipped
- |— Delivered
- |— Cancelled
- └— Returns

5. Customers

6. Payments

- |— Transactions
- |— Failed Payments
- └— Refunds

7. Shipping

- └─ Shipping Zones
- └─ Shipping Methods
- └─ Rates
- └─ Shipments

8. Tax

9. Currency

10. Coupons

11. Reviews

12. Marketing

- └─ Banners
- └─ Promotions
- └─ Campaigns

13. CMS

- └─ Pages

└─ Blogs

└─ FAQs

14. Reports

15. Notifications

16. Support

17. Users & Roles

18. Settings

19. Audit Logs

59. IMPORTANT GLOBAL SETTINGS

Admin Settings should contain:

Company

- Company Name
- Logo
- Address
- Email
- Phone

- Tax details

Website

- Website Name
- Favicon
- Social Media
- Contact information

Currency

- Base Currency
- Supported Currencies
- Exchange Rate
- Rounding Rules

Country

- Supported Countries
- Shipping availability

Payment

- Payment gateways
- API keys
- Webhooks
- Test/Live mode

Shipping

- Shipping providers
- Shipping rates
- Free shipping rules

Tax

- Tax rules
- Tax-inclusive/exclusive pricing

60. IMPORTANT CURRENCY RULE

I strongly recommend the developer follows this architecture:

BASE CURRENCY

INR

Exchange Rate Engine

Customer Currency

But the **order must permanently store**:

Currency = USD

Exchange Rate Used = 83.25

Product Price = \$60.06

Tax = \$X

Shipping = \$X

Grand Total = \$X

This prevents future exchange-rate changes from changing historical invoices.

61. ORDER ID / INVOICE ID

Use separate IDs.

Example:

Order:

MST-ORD-2026-000001

Invoice:

MST-INV-2026-000001

Payment:

MST-PAY-2026-000001

Shipment:

MST-SHP-2026-000001

Return:

MST-RET-2026-000001

62. AUDIT LOG

Admin actions must be recorded.

Example:

Admin: admin@company.com

Action:

Changed product price

Product:

Designer Silk Saree

Old Price:

₹5,000

New Price:

₹5,500

Date:

28-Aug-2026

This is extremely important for a production e-commerce platform.

63. PERFORMANCE

Target:

- Homepage load: ideally under 2-3 seconds under normal conditions
- Optimized images
- CDN
- Lazy loading

- Caching
- Database indexing
- API pagination
- Search indexing

Product listing should never load thousands of products in one API response.

64. BACKUP & RECOVERY

Developer should implement:

- Automated database backups
 - File/image backups
 - Disaster recovery strategy
 - Database point-in-time recovery where supported
 - Monitoring
 - Error logging
-

65. DEVELOPMENT PHASES

PHASE 1 - FOUNDATION

- UI/UX
- Database
- Authentication
- Admin login
- Customer login
- Roles

- Categories

PHASE 2 - CATALOGUE

- Products
- Variants
- Images
- Sizes
- Colors
- Inventory

PHASE 3 - SHOPPING

- Search
- Filters
- Product page
- Wishlist
- Cart

PHASE 4 - CHECKOUT

- Address
- Shipping
- Currency
- Tax
- Payment

PHASE 5 - ORDER

- Order management
- Invoice

- Shipment
- Tracking
- Notifications

PHASE 6 – RETURNS

- Returns
- Refunds
- Customer support

PHASE 7 – INTERNATIONAL

- Countries
- Currency
- International payment
- International shipping
- Tax configuration

PHASE 8 – REPORTING

- Sales
- Customer
- Product
- Country
- Revenue
- Refund reports

PHASE 9 – SECURITY & PRODUCTION

- Security testing
- Performance testing

- Payment testing
- Backup
- Monitoring
- Deployment

66. TESTING REQUIREMENTS

Developer must test:

Customer

- Registration
- Login
- Product search
- Filters
- Cart
- Wishlist
- Checkout
- Payment
- Order
- Cancellation
- Return
- Refund

Admin

- Product creation
- Product editing

- Inventory
- Order processing
- Coupon
- Shipping
- Currency
- Tax
- Reports

Payment

Test:

Successful payment

Failed payment

Payment timeout

Duplicate webhook

Payment cancellation

Refund

Partial refund

Currency

Test:

INR

USD

GBP

EUR

AED

SGD

67. IMPORTANT: DO NOT COPY FLIPKART'S DESIGN

Tell your developer:

"The website should provide an e-commerce experience comparable to leading platforms such as Flipkart/Amazon in terms of functionality and usability, but the UI, branding, layouts, graphics and code must be original and must not copy their proprietary design."

70. FINAL DEVELOPER INSTRUCTION

You can give your developer this as the overall requirement:

GLOBAL FASHION E-COMMERCE PLATFORM - DEVELOPMENT REQUIREMENT

Develop a scalable, secure and responsive global fashion e-commerce website for selling dresses and apparel worldwide.

The platform must contain a Customer Website, Admin Panel and Order/Shipment Management system.

CUSTOMER FEATURES

Customers must be able to:

- Browse categories and products
- Search products
- Filter by size, color, price, brand, category, rating and availability
- View detailed product information
- Select size, color and quantity
- Add products to cart
- Add products to wishlist
- Register/login
- Use OTP/email authentication
- Save multiple addresses
- Apply coupons
- Select country
- Select currency
- View country-specific pricing
- Select shipping method

- Pay online
- Receive order confirmation
- Download invoices
- Track orders
- Cancel eligible orders
- Request returns
- Track refunds
- Submit product reviews
- Contact customer support

PRODUCT MANAGEMENT

Admin must be able to create unlimited products and categories.

Each product must support:

- Product name
- SKU
- Category
- Subcategory
- Brand
- Description
- Images
- Product video
- Size
- Color

- Variant
- MRP
- Selling price
- Discount
- Stock
- Weight
- Dimensions
- Barcode
- SEO information

Each size/color combination must support an independent SKU, price and inventory.

ADMIN PANEL

Admin must be able to manage:

- Dashboard
- Products
- Categories
- Brands
- Product attributes
- Inventory
- Warehouses
- Orders
- Customers
- Payments

- Refunds
- Returns
- Shipping
- Tax
- Currency
- Coupons
- Reviews
- Banners
- Promotions
- CMS pages
- Blogs
- Reports
- Notifications
- Support tickets
- Admin users
- Roles and permissions
- Audit logs
- System settings

MULTI-CURRENCY

The system must support worldwide currencies.

Initial currencies should include:

INR, USD, GBP, EUR, AED, SGD, MYR, SAR, AUD and CAD.

The system must support automatic exchange-rate updates as well as administrator-controlled exchange-rate overrides.

Every order must permanently store the currency and exchange rate used at checkout so that historical orders and invoices never change because of future exchange-rate fluctuations.

COUNTRY MANAGEMENT

Admin must be able to configure supported countries.

Country selection should control:

- Currency
- Tax rules
- Shipping availability
- Shipping rates
- Payment methods
- Delivery methods

The customer may manually change the detected country/currency.

PAYMENT

The system must use secure payment-gateway integration.

Support should be designed for gateways such as Stripe, Razorpay, PayPal or other suitable providers depending on the merchant's operating countries.

Never store raw card details on the application server.

Payment status must be verified server-side using gateway APIs/webhooks.

Payment statuses:

INITIATED, PROCESSING, SUCCESS, FAILED, CANCELLED, REFUNDED and PARTIALLY_REFUNDED.

CHECKOUT

Checkout should contain:

1. Customer/login
2. Shipping address
3. Billing address
4. Delivery method
5. Coupon
6. Tax
7. Shipping
8. Payment
9. Order review
10. Place order

The customer must see the final payable amount and currency before payment.

ORDER MANAGEMENT

Order lifecycle:

ORDER PLACED → PAYMENT CONFIRMED → ORDER CONFIRMED →
PROCESSING → PACKED → SHIPPED → OUT FOR DELIVERY → DELIVERED

Additional statuses:

CANCELLED, RETURN REQUESTED, RETURN APPROVED, RETURN PICKED UP,
REFUND INITIATED, REFUNDED and FAILED DELIVERY.

Generate unique Order ID, Invoice ID, Payment ID, Shipment ID and Return ID.

BILLING / INVOICE

Generate a professional PDF invoice for every eligible order.

Invoice must contain:

- Company information
- Logo
- Customer details
- Billing address
- Shipping address
- Order number
- Invoice number
- Invoice date
- Payment method
- Currency
- Exchange rate where applicable
- Product details
- SKU
- Quantity
- Price
- Discount
- Tax
- Shipping
- Grand total

Invoice must be downloadable by the customer and accessible to authorized administrators.

TAX

Implement a configurable tax engine rather than hard-coding one country's tax system.

For India, support configuration for GST, CGST, SGST and IGST where applicable.

For other countries, allow country/region-specific tax rules to be configured according to applicable laws and professional tax advice.

SHIPPING

Create configurable shipping zones and shipping methods.

Shipping rates can depend on:

- Country
- Region
- Postal code
- Product weight
- Order value
- Quantity
- Shipping method

Support standard and express delivery.

The architecture should support future courier integrations and shipment tracking.

INVENTORY

Maintain:

- Available stock
- Reserved stock
- Sold stock
- Returned stock
- Damaged stock

- Reorder level

Implement stock movement history and low-stock alerts.

RETURNS AND REFUNDS

Customers must be able to request returns from their order page.

Return workflow:

Customer Request → Admin Review → Approval/Rejection → Pickup → Product Received → Quality Check → Refund

Support full and partial refunds.

Refunds must be linked to the original payment transaction.

COUPONS

Admin can create:

- Percentage discounts
- Fixed discounts
- Minimum order values
- Maximum discount limits
- Start/end dates
- Product/category restrictions
- Country restrictions
- Usage limits
- Customer usage limits

REVIEWS

Only eligible customers should be allowed to submit reviews.

Support:

- Rating
- Review text
- Images
- Review moderation

NOTIFICATIONS

Send email/SMS/WhatsApp/push notifications where configured for:

- Registration
- Order confirmation
- Payment confirmation
- Packing
- Shipment
- Delivery
- Cancellation
- Return
- Refund

REPORTS

Admin reports must include:

- Sales
- Orders
- Revenue
- Products
- Inventory
- Customers

- Returns
- Refunds
- Payments
- Country-wise sales
- Currency-wise sales
- Best-selling products
- Low-stock products

SECURITY

Implement:

- HTTPS
- Secure authentication
- Password hashing
- Role-based access control
- Admin 2FA
- API security
- Rate limiting
- Secure file uploads
- SQL injection protection
- XSS protection
- CSRF protection where applicable
- Payment webhook verification
- Audit logs

- Automated backups
- Monitoring
- Error logging

RECOMMENDED TECHNOLOGY

Frontend: Next.js / React.js

Backend: Node.js/NestJS or Java Spring Boot

Database: PostgreSQL

Cache: Redis

Search: OpenSearch/Elasticsearch

Storage: AWS S3

CDN: CloudFront

Hosting: AWS

The architecture must use APIs so that the same backend can later support Android and iOS applications.

RESPONSIVE DESIGN

The website must work on:

- Desktop
- Laptop
- Tablet
- Android
- iPhone

Use an original, premium fashion-oriented UI. Do not copy Flipkart/ Amazon's proprietary visual design. The platform may provide comparable e-commerce functionality and usability while maintaining completely original branding and UI.

DEVELOPMENT REQUIREMENT

Before development begins, prepare:

1. Complete UI/UX wireframes
2. Database ER diagram
3. API documentation
4. Admin permission matrix
5. Customer journey
6. Order-state diagram
7. Payment flow
8. Refund flow
9. Multi-currency architecture
10. Tax architecture
11. Shipping architecture
12. Security architecture
13. Deployment architecture
14. Testing plan
15. Production deployment plan

The final system must be scalable, secure, mobile responsive, SEO-friendly, API-driven and suitable for worldwide e-commerce operations.

My recommendation: don't ask the developer to build everything in one release. Build MVP → payment/order/shipping → international currency/tax → returns/reports →

mobile app. This will reduce cost, bugs and development time while keeping the architecture ready for worldwide expansion.
